

THE ROAD MAP TO SUCCESSFUL ADOPTION

01 Introduction

The best way to learn about VoluMill and the positive impact it can have on your business is by attending an online presentation. At this point you'll want to involve all the key-decision makers since we're going to need their help along the way.

02 Identify & Collect Data

Next we'll identify one of your parts that can be used for a comparative study. This is where we involve decision makers since they need to confirm our objectives. We'll need to gather all the current cost data, machine-tool specifications, and run time data.

03 Apply Proven Science

Based upon your machine-tool's capabilities, we'll program your part using VoluMill's proven science-based toolpaths. When we're done you'll see how we did it, and how easily you can do it too.

04 Validation Time

Now it's time to cut your part on your machine tool and validate the benefits of VoluMill. Based upon the performance improvements and calculated cost savings we've achieved, your company can now cost justify an adoption budget and move forward.

05 Identify Scope of Adoption

Next we'll need to identify all the groups that can benefit from VoluMill. Within those groups, assign a project leader. We'll schedule a presentation with all leaders and review VoluMill, and the cost benefits already identified.

06 Educate Users

Now we'll deliver group presentations and end-user training. Then, we'll identify the initial parts you'll want to program. We'll support your users, document results, and capture best-practices methodologies for your company.

07 Measure Success

Now it's time to review the results and best-practices we developed with each group. From here, we'll develop a corporate wide support system tied directly to our team at Celeritive.

08 Continuous Improvement

From here on we'll monitor your usage and provide ongoing support. This includes product updates, and any needed guidance. We'll also coordinate regularly scheduled technical meetings to review your teams usage and enhancement requests.

VoluMill™
Because it works™
